Discipline-Specific Regulations for Study and Examinations for the Master's and Ph.D. Programs in *Cognitive Science – Embodied Cognition* at the University of Potsdam

dated January 20, 2016

The Faculty Council of the Human Sciences Faculty at the University of Potsdam has approved on January 20, 2016 the following study and examination regulations, on the basis of the new Brandenburg Higher Education Act Articles 19 (1), 22 (1-3), 31 in connection with Article 72 (2(1)) of the Brandenburg Higher Education Act of April 28, 2014 (Law and Ordinance Gazette (GVBl.) I/14, [no. 18]), last amended by Article 2 of the law of July 1, 2015 (GVBl. I/15 [no. 18]) in combination with the Ordinance on the Design of Examination Regulations to Guarantee the Equivalency of Studies, Examinations, and Degrees (University Examination Ordinance - HSPV)
of March 4, 2015 (GVBl. II/15 [no. 12]) and with Article 14 (1(2)) of the Basic Constitution of the University of Potsdam (GrundO) of December 17, 2009 (Bulletin UP no. 4/2010 p. 60) ------ in the Third Amended Version of the Basic Constitution of the University of Potsdam (GrundO) of May 21, 2014 (Bulletin UP no. 6/2015 p. 235) and Article 1(2) of the new version of the General Admission Regulations for Master's Degree Programs at the University of Potsdam not related to teacher education (BAMA-O) (Bulletin UP no. 3/2013, p 35), last amended on February 26, 2014 (Bulletin UP 3/2014, p. 35):[1]

Table of Contents

I. General Section

§ 12 Duration and Organization of the Second Segment of the Master's/Ph.D. Program
§ 13 Doctoral Studies
§ 14 Validity, Termination, Transfer Regulations

Appendix 1: Module descriptions
Appendix 2: Sample degree progress plans

[1] Approved by the President of the University of Potsdam on March 7, 2016

I. General Section

§ 1 Applicability

(1) These regulations apply to the consecutive master's / Ph.D. program in *Cognitive Science – Embodied Cognition* at the University of Potsdam.

(2) In the event that these regulations contradict the BAMA-O, then the provisions in the BAMA-O supersede these regulations.

(3) The regulations for a doctoral degree at the Faculty of Human Sciences at the University of Potsdam also apply to the Ph.D. program.

§ 2 Degree

(1) The Faculty of Human Sciences at the University of Potsdam awards the degree of "Master of Science" ("M.Sc.") to students who have completed the necessary credit points and graduation requirements.

(2) The Faculty of Human Sciences at the University of Potsdam awards the degree of "Doctor of Philosophy" ("Ph.D.") to students who have completed the necessary credit points and graduation requirements.

§ 3 Objectives and Aims of the Master's/Ph.D. Program

(1) This degree program is divided into two segments: first, a two-year research-oriented master's program that leads students through 120 credit points of coursework and finishes with the "M.Sc." degree; and second, a two-year Ph.D. program with 120 credit points and the "Ph.D." degree.

(2) The master's / Ph.D. program in *Cognitive Science – Embodied Cognition* takes the knowledge, skills and methodologies acquired in the bachelor's program and expands them in an interdisciplinary direction in the field of cognitive science. The program qualifies graduates to conduct scientific work as well as private-sector research and management in the field of cognitive analysis and modeling of human behavior. Graduates possess the knowledge about cognitive processes and their biological foundations required to generate hypotheses about human behavior, perform quantitative measurements to test the hypothesis by means of experiments, and to develop cognitive modeling in the interdiscipli-

nary sub-fields of the cognitive sciences and their applications.

(3) Graduates have both the subject-specific and interdisciplinary methodological skills required to describe scientific problems in cognitive process analysis. They can formulate new approaches to problems in this field, perform experimental investigations and modeling, and they can apply and further develop methods used to answer these research questions. Graduates can critically analyze and evaluate existing experimental approaches and mathematical models. They are able to organize collaboration between teams working in experimental and theoretical ways, to define intermediate objectives, to guide the preparation of research results, and to present these results in English.

(4) During the transition to the Ph.D. program, we assess the candidate's capacity for independent scholarly work, the writing of scholarly publications, and the presentation of scientific research results. The Ph.D. program includes guidance for scholarly work in the context of a dissertation project, which is typically a more profound treatment of a scholarly project developed during the student's master's program. The Ph.D. program prepares students for a doctoral degree from the Faculty of Human Sciences.

II. Master's Program

§ 4 Admission Prerequisites

The prerequisites for admission to the *COSEC* master's program are:

1. Academic degree

(a) A bachelor's degree or similar from a degree-granting institution or similar institution of higher education in the Federal Republic of Germany in one of the subjects relevant to the *CoSEC* master's program; for example, psychology, neuroscience, linguistics, cognitive science, computer science, or

(b) A degree equivalent to (a) from a university abroad.

2. Evidence of sufficient basic knowledge in the field of "Experimental Psychological Training" and/or "Mathematics" (9 CP each; see also the Bridge Module BM acc. to Article 5 of the subject-specific Degree and Examination Regulations for the integrated master's / Ph.D. program in Cognitive Sciences – Embodied Cognition at the University of Potsdam). This evidence is typically provided through successful participation in a total of 9 CP of coursework. Applicants without sufficient knowledge are obligated under Article 5 of the Degree Regulations to complete up to two Bridge Modules.

3. Proof of English-language skills at the B2 level, evidenced by one of the documents listed in Article 4 Para 1 of the ZulO (Admission Regulations).

§ 5 Obligation to Complete Bridge Module

Applicants who cannot demonstrate sufficient skills in accordance with Article 3 no. 2, whether in "Experimental Psychological Training" or "Mathematics," are admitted and obligated to complete either the BM1 or BM2 module during their master's studies. Details are governed by Article 8. If applicants lack knowledge of "Experimental Psychological Training" and "Mathematics," then they will not be admitted.

§ 6 Application Documents and Deadlines

(1) It is possible to apply for the first semester in the winter semester; an application for upper semesters is possible in the summer or winter semester.

(2) In addition to the documents in Article 5 Para 3 ZulO, the following documents must be submitted:

- Evidence of required language competence (according to Article 3 no. 3),
- Evidence of Bridge Module knowledge (according to Article 3 no. 2).

§ 7 Duration and Organization of the First Segment of the Master's/Ph.D. Program

(1) The research-focused, *consecutive* master's program in *Cognitive Sciences – Embodied Cognition* is offered at the University of Potsdam with a standard period of study (full-time program) of *4* semesters and *120* credit points (CP).The master's segment can only start in the winter semester.

(2) The master's program is suitable for part-time study. Part-time study requires advising from the relevant faculty so that an individualized plan of study can be created. Proof of this advising must be attached to an application in accordance with Article 3 of the Regulations for Part-Time Studies at the University of Potsdam (Part-Time Regulations). The provisions of the Part-Time Regulations also apply.

§ 8 Modules and the Course of Master's Studies

(1) The Master's degree in *Cognitive Science – Embodied Cognition* is comprised of the following components:

Master's Degree		
Module Ab-	**Name of Module**	**CP**

breviation		
I. Obligatory modules, OM (*Total of 63 CP*)		
OM1	Cognitive Science and Embodied Cognition	15
OM2	Mathematical Modeling in Neurocognitive Psychology	9
OM3	Neuroscience of Embodied Cognition	9
OM4	Advanced Methods: Experimental Programming	6
OM5	Advanced Methods: Multivariate Statistics	9
OM6	Individual Research Modules	15
II. Electives (choice modules, CM) (*Total 18 CP*)		
Modules adding up to 18 credit points must be selected and successfully completed.		
CM_D1	Developmental Science and Embodiment	6
CM_D2	Language and Development	6
CM_D3	Cognitive and Sensorimotor Development	6
CM_N1	Neurolinguistic Perspectives	6
CM_N2	Philosophy of Neuroscience and Embodied Cognition	6
CM_N3	Cognitive Neuroscience, Neuropsychology and the Body	6
III. Bridge Modules (9 CP)		
In addition to the elective modules, there are Bridge Modules (BM) that, depending on the student's prior education, are meant to close gaps in the student's knowledge of "Experimental Psychological Training" or "Applied Mathematics" (9 CP). The Examining Board will determine upon admission to the master's program which of the two modules (BM1 or BM2) must be completed. If the Examining Board finds that the student has sufficient knowledge in both Bridge Module fields, then 9 CP will be earned in the BM3 laboratory training course, the content of which shall be determined by the head of the respective laboratory.		
BM1	Bridge Module: "Experimental Psychological Training"	9
BM2	Bridge Module: "Applied Mathematics"	9
BM3	Laboratory Internship	9
III. Master's Thesis (30 CP)		30
Total obligatory and elective modules to be completed		120

(2) The language of instruction in the *Cognitive Science – Embodied Cognition* program is English.

(3) The descriptions of the modules named in Section (1) are listed in the module catalog in Appendix 1 to these regulations

(4) A sample degree progress plan for the master's degree is provided in Appendix 2 of these regulations.

§ 9 Stay Abroad

A stay abroad during university study is possible; if one plans on spending a whole semester abroad, then the master's thesis should be prepared during the fourth semester.

§ 10 Master's Thesis

(1)
As soon as the student has completed at least 75 percent of the total required credit points, minus credit points for the thesis and the oral defense, he or she must immediately propose a topic for his/her master's thesis.

(2) The master's thesis, including the oral defense, is equivalent to 30 credit points. The master's thesis must be written in English.

III. Ph.D. Program

§ 11 Admission to the Ph.D. Program

(1) Students or graduates of the master's program in Cognitive Science – Embodied Cognition can apply for admission to the Ph.D. program. The application must include the following documents:
- Degree certificate or overview of all coursework completed during the master's program
- Copy of the English-language master's thesis
- Project sketch for a research project that was prepared together with at least one of the persons authorized to supervise doctoral students.
- A proposal by the student regarding the dissertation advisor or, if necessary, supervision authorization.

(2) The application must be submitted by August 15 at the latest. Students or graduates of a program similar to the master's program in Cognitive Science – Embodied Cognition are also qualified to apply.

(3) Prerequisites for admission are:

- Successful completion of a master's degree
- A well-articulated research orientation, as exhibited by a positive evaluation by one of the two dissertation supervisors
- Acceptance as a doctoral student according to the doctoral degree regulations.

(4) After admission to the Ph.D. program has been granted, you can apply for enrollment. The application for enrollment in the Ph.D. program must be completed by March 15 to start in the Summer Semester or by September 15 to start in the Winter Semester.

(5) Enrollment requires admission as a doctoral candidate under the applicable version of the regulations for a doctoral degree at the Human Sciences Faculty at the University of Potsdam.

(6) Students who hold a degree comparable to the master's degree in Cognitive Science - Embodied Cognition and have been admitted as a doctoral candidate under the applicable version of the regulations for a doctoral degree at the Human Sciences Faculty at the University of Potsdam can apply for acceptance to the Ph.D. program.

(7) The Examining Board makes decisions about the comparability of master's qualifications; the Doctoral Committee makes decisions regarding the acceptance of the application.

§ 12 Duration and Organization of the Second Segment of the Master's/Ph.D. Program

(1) In accordance with the regulations for a doctoral degree, the candidate will conclude a supervision agreement with the primary and secondary supervisors.

(2) During the two-year Ph.D. program, the candidate primarily works independently on his/her research project in accordance with the supervision agreement and completes the modules for the Ph.D. program.

(3) Students must complete credit points in the following modules to continue their interdisciplinary education.

Ph.D. Study		
Module Abbreviation	**Name of Module**	**Credits**
FOR	Progress Reports	12
DOC	Colloquium for Doctoral Candidates	12
COG	Cognitive Science Colloquium	12
PGS	Potsdam Graduate School Courses	24
Dissertation and Defense		60
Total: 120 CP		

(4) After discussion with both supervisors, candidates can complete part of their dissertation in an external laboratory. The supervisors must ensure that the partner institution names a suitable supervisor.

(5) The research project should typically be completed within 2 years. In exceptional cases, up to two one-semester extensions can be granted. No additional credit points will be earned during these additional semesters. If the FOR, DOC, COG and PGS modules are not completed by the expiration of these extension periods, the supervisory relationship is terminated, the candidate's admission is revoked, and the possibility of completing the dissertation is eliminated. The provisions of Article 11 Para 3 of the Registration Regulations apply.

§ 13 Doctoral Studies

(1) Upon consultation with the supervisors and after the successful completion of the modules, an application is submitted to initiate the doctoral examination procedure.

(2) The doctoral examination procedure is conducted in accordance with the doctoral degree regulations.

§ 14 Application, Expiration and Transitional Provisions

(1) These regulations take effect o*n the day of their publication in the Official Public Notices of the University of Potsdam*.

(2) These regulations apply to all students who enroll in the master's program in *Cognitive Science – Embodied Cognition* at the University of Potsdam after these regulations go into effect.

Appendix 1: Module Catalog for the Master's Program

OM1 Cognitive Science and Embodied Cognition	Number of credit points (CP): 15
Module type (mandatory or elective):	Mandatory module
Content and objective of module:	Objectives: Students have a solid knowledge of concepts in the cognitive sciences and *embodied cognition*. This forms the foundation that allows students to independently develop and critically assess scientific literature on current issues in the cognitive sciences and the *Embodied Cognition* research field. Students can derive predictions for specific problems by drawing on theories from the cognitive sciences and the theory of Embodied Cognition. They can develop experimental arrangements for theoretically derived hypotheses. Contents: This lecture offers a comprehensive overview of the interdisciplinary field of cognitive sciences and *Embodied Cognition* while taking into account selected topics from different perspectives (for example, sensory and motor components in the representation of knowledge). This course also focuses on reading about and discussing current research questions. In the accompanying seminar, students develop central concepts from the lectures, working from original literature, while simultaneously teaching students from various bachelor's programs about the integration of specific sub-fields (for example, psychophysics, motor skills, cognitive psychology) into the cognitive sciences. The completion of trial research hours (meaning participation in experiments as a subject) contribute to learning about the experimental treatment of research questions.
Module examination (number, form, scope):	Course-related module examination(s); see below
Independent study time (in hours):	395 (preparation for and review of courses and presentations; exam preparation)

Courses (type of teaching)	Contact time (in semester hours)	Supplementary exam work (number, form, scope)		Module examination (number, form, scope)
		For completing the module	For admission to the module exam	
Lecture (6 CP)	2	Three written summaries of studies discussed in class (1000 words each)		Written exam (90 min)
Seminar (8 CP)	2	2 Presentations and written term papers (5000 words each)		
Participation in experiments (1 CP)	0	10 Research subject hours (= 1 semester hour)		

Offered:	Each year (in the winter semester)
Prerequisite for taking the module:	None
Teaching unit(s):	Psychology (interdisciplinary professorship in cognitive sciences)

OM2 Mathematical Modeling in Neurocognitive Psychology	Number of credit points (CP): 9
Module type (mandatory or elective):	Mandatory module
Content and objective of module:	Objectives: Students will gain broad, well-established skills in mathematical modeling methods for neurocognitive processes and systems. Students will be able to work from this foundation to independently develop and critically assess current scientific literature on current issues in psychology and the neurosciences. Students will be able to select and implement suitable methods for specific problems in the mathematical description of cognitive systems. Students will be able to derive experimental predictions from neurocognitive models and quantify them by means of mathematical models. Contents: This module deals with the most important mathematical modeling approaches in neurocognitive processes and systems in the lecture course, with a focus on stochastic processes (i.e., random walk models) and dynamic systems (i.e., discrete representations or systems of ordinary differential equations). The seminar also focuses on working with computers to implement mathematical models and problems associated with this process.
Module examination (number, form, scope):	Course-related module examination(s); see below
Independent study time (in hours):	225 (preparation for and review of courses; homework; exam preparation)

Courses (type of teaching)	Contact time (in semester hours)	Supplementary exam work (number, form, scope)		Module examination (number, form, scope)
		For completing the module	For admission to the module exam	
Lecture (5 CP)	2			Written exam (90 min)
Seminar (4 CP)	2			

Offered:	Each year (in the summer semester)
Prerequisite for taking the module:	None
Teaching unit(s):	Psychology (Professor of General and Biological Psychology)

OM3 Neuroscience of Embodied Cognition	Number of credit points (CP): 9
Module type (mandatory or elective):	Mandatory
Content and objective of module:	Objectives: Students will gain a solid knowledge of neurocognitive foundations and experimental methods in *embodied cognition*. Students will be able to use literature in the cognitive neurosciences to develop current research questions and to critically examine published researched results. Students will be able to choose the appropriate neuroscientific methods for testing theoretically derived hypotheses. Contents: This lecture offers a comprehensive overview of the interdisciplinary field of cognitive neurosciences while taking into account selected topics from different perspectives (for example, being able to understand and explain the advantages and disadvantages of various imaging methods; comparing evaluation strategies in a comparative manner). This course also focuses on analyzing and discussing current research questions. In the accompanying seminar, students develop central concepts from the lectures, working from original literature, while simultaneously teaching students from various bachelor's programs about the integration of specific subfields into the cognitive sciences.
Module examination (number, form, scope):	Course-related module examination(s); see below
Independent study time (in hours):	225 (preparation for and review of courses and presentations; exam preparation)

Courses (type of teaching)	Contact time (in semester hours)	Supplementary exam work (number, form, scope)		Module examination (number, form, scope)
		For completing the module	For admission to the module exam	
Lecture (5 CP)	2	Three written summaries of studies discussed in class (1000 words each)		Written exam (90 min)
Seminar (4 CP)	2	1 Presentation and term paper (5000 words)		

Offered:	Each year (in the summer semester)
Prerequisite for taking the module:	None
Teaching unit(s):	Psychology (interdisciplinary professorship in cognitive sciences)

OM4 Advanced Methods: Experimental Programming	Number of credit points (CP): 6
Module type (mandatory or elective):	Mandatory
Content and objective of module:	Objectives: You will gain broad and well-founded knowledge in experimental-psychological and psychophysical methods, especially in the computer-aided implementation of experimental designs with programming languages such as Matlab / Psychophysics Toolbox or Python. You will master time-controlled stimulus presentation, reaction measurement, and the foundations of presenting animated stimuli. Students will be able to work from this basis to independently plan experiments and carry them out in an experimental control. Students will master basic knowledge of a programming language, methods in reaction time and error measurement, as well as classical and adaptive psychophysical processes. Contents: Planning and construction of an experimental control system; implementation by means of appropriate programming languages; structuring and evaluation of experimental designs; identification of advantages and disadvantages.
Module examination (number, form, scope):	Course-related module examination(s); see below
Independent study time (in hours):	135

Courses (type of teaching)	Contact time (in semester hours)	Supplementary exam work (number, form, scope)		Module examination (number, form, scope)
		For completing the module	For admission to the module exam	
Seminar or tutorial (6 CP)	2			1-hour project presentation

Offered:	Each year (in the summer semester)
Prerequisite for taking the module:	None
Teaching unit(s):	Psychology (professor of cognitive sciences)

OM5: Advanced Methods: Multivariate Statistics				Number of credit points (CP): 9
Module type (mandatory or elective):		Mandatory		
Content and objective of module:		Objectives: Students will be able to carry out statistical analysis of experimental data independently and appropriately in order to test scientific hypotheses. They will gain a solid overview of multivariate statistical procedures. Contents: Knowledge of the general linear model and processes that are built upon it. Preparation of raw data for visualization and statistical analysis, as well as the statistical evaluation of theoretically derived hypotheses. Communication of relevant knowledge by means of guided evaluation of sample data sets and discussion of case studies, including the integration of current literature.		
Module examination (number, form, scope):		Course-related module examination(s); see below		
Independent study time (in hours):		225		
Courses (type of teaching)	Contact time (in semester hours)	Supplementary exam work (number, form, scope)		Module examination (number, form, scope)
		For completing the module	For admission to the module exam	
Lecture/Seminar (5 CP)	2			Written exam (90 min)
Tutorial (4 CP)	2			
Offered:		Each year (in the winter semester)		
Prerequisite for taking the module:		None		
Teaching unit(s):		Linguistics (Professor of Psycho- and Neurolinguistics, 50%) and psychology (General Psychology 1: Cognition, 50%).

CM_D1: Developmental Science and Embodiment	Number of credit points (CP): 6
Module type (obligatory or elective):	Elective module
Content and objective of module:	Objectives: Students will gain enhanced knowledge of current research questions in developmental psychology and concept acquisition, including issues from the perspective of embodied knowledge. Students will be able to see interrelations between relevant theories and to critically examine them. They will be able to identify and solve practice-oriented problems. Contents: Seminars on developmental psychology and knowledge acquisition and related topics, as well as the role of the body and activity planning in cognition across the lifespan.
Module exam (number, form, scope):	Presentation (60 min) with written elaboration (20 pages) or oral examination (30 min)

Status:

CM_N2: Philosophy of Neuroscience and Embodied Cognition				Number of credit points (CP): 6
Module type (obligatory or elective):		Elective module		
Content and objective of module:		Objectives: Students will gain profound knowledge of neurophilosophical theories of human knowledge and cognition, as well as current questions in relevant subfields of philosophy. They will be able to compare relevant theories and critically analyze them. Students will be able to adapt or develop new paradigms or models for a specific problem in current research. Examples of content: Epistemology, theories of the representation of knowledge and their relations to sensory and motor activity; agency and free will.		
Module examination (number, form, scope):		Presentation (60 min) with written elaboration (20 pages) *or* oral examination (30 min)		
Independent study time (in hours):		135		
Courses (type of teaching)	Contact time (in semester hours)	Supplementary exam work (number, form, scope)		Module examination (number, form, scope)
		For completing the module	For admission to the module exam	
Seminar (6 CP)	2			
Offered:		Every summer semester		
Prerequisite for taking the module:		None		
Teaching unit(s):		Philosophy (Professor of Theoretical Philosophy)

Status:

COG "Cognitive Science Colloquium"				Number of credits (CP): 12
Module type (obligatory or elective):		Mandatory		
Content and objective of module:		Objectives: Students will be able to critically evaluate current research in the field of the cognitive sciences, recognize connections between sub-fields, and organize these connections into interdisciplinary contexts. Contents:Active participation in the colloquium in terms of preparation and, for example, organization of colloquiums, of discussion panels with guests, and laboratory tours.		
Module examination (number, form, scope):		Report (approx. 5000 words) on the seminar		
Independent study time (in hours):				
Courses (type of teaching)	Contact time (in semester hours)	Supplementary exam work (number, form, scope)		Module examination (number, form, scope)
		For completing the module	For admission to the module exam	
Seminar (12 CP)	2			
Offered:		Every semester		
Prerequisite for taking the module:		None		
Teaching unit(s):		Psychology (Interdisciplinary Professor of Cognitive Sciences, 50%; Professor of General and Biological Psychology, 50%).
